Lot Code Explanation

February 1, 2026

Milne fruit products issues lot numbers with a two-letter code followed by a computer generated five number code. The two-letter code designates the Milne facility from which the product was packed.

MF – Milne Fruit Products Prosser Main Plant

MV – Milne Fruit Products Prosser Vegetable Plant

MS – Milne Fruit Products Sunnyside Plant

FC – Milne Fruit Products Formulation and Compounding, Aseptic Production Plant

Example:

Lot MF25024 – The “MF” designates the Prosser Main Plant while the “25024” represents the computer generated code.

In addition, lots packaged at the Milne Vegetable Plant will include a 1 or a 2 at the end of the lot number if the product was packed using our aseptic fillers. The number indicate which filler the product was packed from.

Example:

Lot MV25024-1 – The “MV” designated the Prosser Vegetable Plant, the “25024” represents the computer generated code, and the “-1” indicates the product was packaged from aseptic filler 1.

All lot codes are unique and cannot be duplicated by our computer generated code system.
